

SAKTHI S - SOFTWARE ENGINEER

sakthisivachandrakumar@gmail.com | +91 98849 87269

PROFESSIONAL SUMMARY

Frontend Developer with around 5 years of hands-on experience in designing, developing, and deploying scalable, high-performance web applications using React.js, Next.js, and modern JavaScript (ES6+). Expertise in building reusable, modular, and maintainable UI components with a strong focus on performance optimization and seamless user experience.

Proficient in state management using Redux and Context API, along with robust REST API integration and backend development using Node.js. Experienced in working with MongoDB for efficient data handling and building full-stack applications.

Skilled in implementing CI/CD pipelines and working in Agile/Scrum environments, collaborating with cross-functional teams to deliver user-centric, business-driven solutions. Adept at writing clean, efficient, and testable code while following industry best practices and modern frontend architecture.

WORKING EXPERIENCE

Software Developer

Doodle-Blue Innovations Private Limited

JUN 2025 – PRESENT

Software Developer

Azure Soft Tech Solutions

FEB 2022 – MAY - 2025

EDUCATION

B.COM- Information System Management

2018-2021

S.I.V.E.T College, Chennai

TECHNICAL SKILLS

Frontend: HTML5, CSS3, JavaScript (ES6+), SASS, React.js, Redux, Context API, Hooks

UI Frameworks: Bootstrap, Material UI

Backend & Database: Node.js, Next.js, MongoDB

Tools: Git, GitHub, VS Code, Webpack, Postman

Other: REST API Integration, Responsive Design, Cross-Browser Compatibility, Performance Optimization, Agile/Scrum

PROJECT 4:

DIGITAL ASSET MANAGEMENT

DEC 2025 - PRESENT

Technologies & Skills Used:

HTML5, CSS3, SCSS, JavaScript (ES6+), TypeScript, React.js, Redux Toolkit, Node.js, jQuery, AJAX, REST APIs,

Description

Developed an enterprise-grade Digital Asset Management (DAM) system integrated with Marketing Delivery Suite (MDS) to centralize storage, management, and delivery of digital assets such as images, videos, and marketing templates. The platform improves asset lifecycle management, ensures brand consistency, and enables faster multi-channel campaign execution.

Roles & Responsibilities

- Developed and maintained clean, scalable, and reusable UI code using HTML5, CSS3, JavaScript (ES6), and modern frameworks.
- Built dynamic and user-friendly interfaces using jQuery, AJAX, and DHTML, ensuring high performance and responsiveness.
- Implemented ReactJS-based modules, leveraging component-based architecture, Virtual DOM, Hooks, and functional components for scalable enterprise applications.
- Developed reusable React components and custom hooks to improve maintainability and code reusability.
- Implemented React Router for seamless navigation and dynamic routing across application modules.
- Managed application state efficiently using Redux for complex data flow and state handling.
- Consumed and integrated RESTful APIs using Axios/Fetch for real-time data interaction.

- Handled asynchronous operations using Promises and async/await, ensuring smooth data flow and UI updates.
 - Designed and developed server-side logic using Node.js for authentication, data processing, and business workflows.
 - Created role-based dynamic navigation menus with database-driven content and secure access control.
 - Ensured UI consistency, cross-browser compatibility, and responsive design across multiple devices.
 - Optimized application performance using memoization, lazy loading, and efficient rendering techniques.
 - Participated in Agile/Scrum development, including sprint planning, daily stand-ups, and code reviews.
 - Used Git for version control with proper branching strategies and collaborative development.
-

PROJECT 3:

GARMENT PRODUCTION MANAGEMENT SYSTEM

AUG 2025 – NOV 2025

Technologies & Skills Used:

HTML5, CSS3, SCSS, JavaScript (ES6+), TypeScript, React.js, Redux Toolkit, Node.js, MongoDB, REST APIs, Bootstrap, CI/CD (Jenkins/GitHub Actions)

Description

Developed a React-based Garment Production Management System to streamline and monitor end-to-end textile manufacturing processes, including fabric tracking, production workflows, and real-time operational insights. The application improves efficiency, reduces manual effort, and provides visibility across all stages of garment production. It handles multiple stages like dyeing, printing, embroidery, and sewing using reusable components and dynamic UI. I integrated APIs for real-time data and built dashboards to track production and alerts, improving overall workflow efficiency.

Roles & Responsibilities

- Designed and developed a **scalable Garment Production Management System** to streamline end-to-end textile manufacturing workflows
- Built **modular, reusable React components**, improving maintainability and reducing development effort
- Implemented dynamic workflows for multiple production stages including **Dyeing, Printing, Embroidery, and Sewing**
- Developed **responsive and user-friendly UI** using React, HTML5, and SCSS, ensuring cross-browser compatibility

- Created **advanced UI components** such as expandable tables, accordions, and dashboards for efficient data visualization
 - Integrated **RESTful APIs** to enable real-time data synchronization for production tracking and inventory management
 - Implemented **real-time updates using event-driven architecture**, improving visibility into production status and alerts
 - Built **interactive dashboards** to monitor KPIs, production progress, and operational alerts
 - Managed application state using **Redux**, ensuring predictable and scalable data flow
 - Utilized **React Hooks and React Hook Form** for efficient form handling and validation
 - Refactored legacy UI by migrating inline styles to **SCSS**, improving code structure and maintainability
 - Optimized application performance by minimizing re-renders and improving component lifecycle management
 - Ensured **clean, maintainable, and high-quality code** through best practices and code reviews
 - Collaborated with cross-functional teams in an **Agile environment**, participating in sprint planning and deliveries
 - Contributed to **continuous improvement of UI/UX and system performance**, enhancing overall user experience
-

PROJECT 2:

BANKING APPLICATION

AUG 2024 – JUL 2025

Technologies & Skills Used:

React.js, Redux, JavaScript (ES6), TypeScript, HTML5, CSS3, Bootstrap, Node.js, Webpack

Description

The project involved developing an in-house banking application aimed at automating business processes using light automation tools. This helped reduce manual intervention, improve operational efficiency, increase revenue, and minimize risks associated with banking operations.

Roles & Responsibilities

- Developed scalable and high-performance web applications using React.js and Redux architecture.
- Built Single Page Applications (SPAs) with reusable components, dynamic forms, and modular structure.
- Utilized ES6 and TypeScript to write clean, maintainable, and strongly typed code.

- Designed and implemented interactive dashboards with charts and draggable UI components.
 - Created responsive, cross-browser-compatible web pages using HTML5, CSS3, and Bootstrap.
 - Integrated RESTful APIs and collaborated closely with backend teams for seamless data flow.
 - Implemented authentication mechanisms using JSON Web Tokens (JWT) for secure access.
 - Used Node.js to handle server-side data communication and API integration.
 - Configured and managed frontend build tools such as Webpack, Babel, and SASS.
 - Followed MVC architecture and best practices for scalable application development.
 - Managed dependencies using NPM and Yarn, and maintained version control using Git.
 - Ensured code quality, performance optimization, and adherence to development standards.

PROJECT 1:

LEARNING MANAGEMENT SYSTEM (LMS)

MAR 2022 – JUN 2024

Technologies & Skills Used:

HTML5, CSS3, SCSS, JavaScript (ES6+), TypeScript, React.js, Node.js, MongoDB, Material UI, REST APIs, CI/CD (Jenkins/GitHub Actions)

Description

Learning Management System (LMS) to deliver an interactive digital learning experience. The platform enables users to enroll in courses, stream video content, track learning progress, and interact with instructors in real-time. Designed a robust admin dashboard for managing users, courses, and analytics. Focused on performance optimization, reusable architecture, and seamless user experience across devices, while ensuring secure and efficient API-driven communication.

Roles & Responsibilities

- Architected and developed dynamic, responsive user interfaces using React.js, HTML5, CSS3, and SCSS following component-based architecture
- Built highly reusable, scalable, and maintainable components using React Hooks and TypeScript for improved code quality and reusability
- Implemented advanced state management solutions using Context API to handle complex application data flows
- Integrated RESTful APIs using Axios/Fetch for seamless communication between frontend and backend systems

- Developed secure authentication and role-based authorization mechanisms for students, instructors, and administrators
 - Designed and implemented dynamic course modules, filtering, and search functionalities for enhanced user experience
 - Built interactive video streaming UI with real-time progress tracking and course completion analytics
 - Optimized application performance using lazy loading, code splitting, memoization, and efficient rendering techniques
 - Improved page load time and reduced bundle size through performance tuning and asset optimization
 - Collaborated with backend developers to define API contracts and ensure smooth data integration using Node.js and Express.js
 - Implemented robust form validation, error handling, and user feedback mechanisms for improved usability
 - Actively participated in Agile/Scrum processes including sprint planning, daily stand-ups, and retrospectives
-
